HORWIN AD series is a single or dipole array wide band VHF/UHF antennas for extensive range of applications - trunking radio systems, military communications, dispatch base stations, amateur radio repeaters, etc.
Dipole incorporates "balun" matching circuit optimized for wide bandwidth and accurate matching. More gain is achieved by coupling single folded dipoles into arrays. Dipoles in array are coupled by precision phasing cable harness keeping low SWR and minimum insertion losses.
The horizontal radiation pattern is adjusted by changing the distance between dipole elements and supporting mast.
All antenna parts are made of AD31 (T6063) aluminium and covered with black polymer powdered coating which resists water and ice buildup, and provides exceptional protection from corrosive gases, UV radiation, salt spray, acid rain and windblown abrasives. The boom is mounted to the mast ( $\varnothing 30-55 \mathrm{~mm}$ ) through the omega clamp with U-bolts. All components of dipole element are DCgrounded for better lighting and antistatic protection.

The phasing cable harness is fully waterproof and protected against hostile environments. Feed cable terminates with N type female connector, nominal impedance-50 Ohm.
